

# FLORIDA WOUND CARE EXCELLENCE PROGRAM

February 1st, 2022 through January 31st, 2023

## 1. Summary

The Florida Wound Care Excellence Program provides 300 scholarships for nurses of skilled nursing facilities over a 12-month period. The program launched on February 1st when Vohra Wound Physicians Management made registrations available, and the nursing clinical staff began accessing the clinical modules.

The program closes out yielding a completion rate of 63%, with a total of 69 completions that took place during the last quarter of the program. Overall, although we fell short with number of completions, we believe the program was successful and are thankful to have partnered with the state to fulfill our mission of raising the level of wound care education and competence for nurses in Florida.

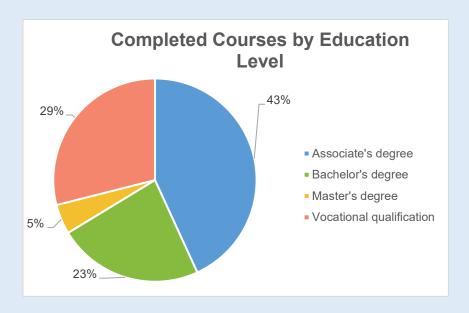

Completions by month are depicted in the chart below:

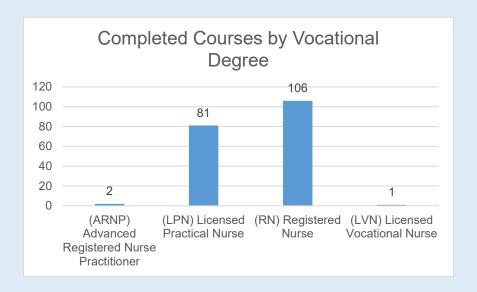

## 2. Demographic Data

The average age of an enrolled nurse was 44.8 years of which 86% are female and 14% are male. Further, 82 nurses or 43% have an Associate's degree, and 53 or 28% of the completions hold a Bachelor's Degree or higher. The remaining nurses hold a Vocational Qualification. The composition of completions by education level and vocational degrees can be found in the charts below:

# 3. Principal Nursing Employment:

The 190 completed courses reached 79 nursing facilities for which the listing can be found in *Exhibit A*. Additionally, the program reached a broad cross section of the state by educating nurses located in 38 counties of which 80 nurses or 42% reside in Pinellas, Orange, Lee, and Miami-Dade Counties. Completed courses by county can be found in *Exhibit B*.

#### 4. Other

On average it took participants 21 days to complete the course after registering.

## 5. Clinical Outcomes Reporting and Conclusion

In our proposal we indicated that this program had the potential to impact the quality of care for residents in facilities when a nurse underwent training and earned their wound care certification. Nurses with higher levels of training have the potential to impact patient outcomes as measures by various clinical wound outcome measure. To evaluate these potential impacts on clinical outcomes, we tracked quality measures publicly reported to CMS in the period before and after a nurse was trained in this program. The facilities were tracked for the reported measure specific to a given facility.

#### Findings and Conclusion:

"Facilities that had a nurse complete the program we found on average had a slightly lower percentage of high risk long-stay residents with pressure ulcers before starting the program. In these facilities the rate was 8.5% versus the average of 8.8% in all facilities across Florida before the start of the program. After completion of the program the number of long stay residents with pressure ulcers dropped by 1%, while the average rate for the Florida facilities increased by .2% to from 8.8% to 9%. (Note: The most current CMS reported data available is for Q4 of 2022. If completion of the program occurred in 2023 the impact cannot yet be reported. However, we have seen a positive impact from this program in the prior years and in multiple states)

\*\*Of note, the Short-stay residents: Changes in skin integrity post-acute care: pressure ulcer/injury quality measure is no longer available or reported on the MDS quality measures dataset.

We are proud of the positive feedback we have received from nurses and their respective facilities. Many of our participants expressed how they enjoyed the course and gained a valuable and deeper insight into wound care management.
