Executive Summary

Introduction

The 2018 Florida Electronic Prescribing Report is submitted to meet the Agency for Health Care Administration's (Agency) requirement in Section 408.0611, Florida Statutes, to annually report on the status of e-prescribing in Florida to the Governor and the Legislature. This report presents a review of Agency activities to promote e-prescribing, highlights of state and national e-prescribing initiatives, Florida e-prescribing metrics, and action steps to be undertaken to promote greater adoption of e-prescribing across the state.

E-prescribing enables the electronic transmission of prescriptions as well as access to a patient's medication history by prescribing physicians at the point of care. Properly used, it improves prescription accuracy, increases patient safety, and supports medication adherence. Physician access to patients' medication history through electronic health records and other e-prescribing systems enables the practitioner to be aware of other medications ordered and to improve coordination of patient care with other treating physicians. The adoption of e-prescribing continues to increase in Florida as the benefits and cost-savings for all participants, including physicians, pharmacies, and patients, have become more evident.

Electronic Prescribing Highlights in 2018

In 2018, the Florida Agency for Health Care Administration continued administering the Florida Promoting Interoperability Program, formerly known as the Florida Medicaid Electronic Health Record Incentive Program. The program is administered in accordance with federal regulations established by the Centers for Medicare and Medicaid Services (CMS) related to the "meaningful use" of certified electronic health record technology (CEHRT). The Health Information Technology for Economic and Clinical Health (HITECH) Act of 2009 established the meaningful use criteria, including an e-prescribing measure that must be met for eligible professionals (EPs) to qualify for an incentive payment. Eligible professionals are currently attesting to Modified Stage 2 meaningful use requirements, which includes e-prescribing more than 50 percent of all permissible prescriptions.

Beginning in 2019, EPs participating in the program will be required to attest to Stage 3 meaningful use requirements, including an increase of the e-prescribing rate to more than 60 percent of all permissible prescriptions. The Stage 3 final rule also requires eligible hospitals (EHs) to query a drug formulary, transmit more than 25 percent of discharge prescriptions electronically, and removes unchanged refill prescriptions from the query requirement for drug formulary.

As of September 27, 2018, the Florida Promoting Interoperability Program has made 17,347 incentive payments totaling over \$576 million to qualifying EPs and EHs.

To support greater adoption of e-prescribing, the Agency conducted outreach to pharmacies and other providers during 2018 regarding available information sharing models and alternatives. Information included the use of the Florida Health Information Exchange Services to enhance secure communications between health care providers about patient care. The outreach teams' e-prescribing focus in 2018 was on providing information about capabilities to allow e-prescribing of controlled substances. The messaging encouraged e-prescribing of controlled substances as one means to help reduce prescription drug abuse and drug overdose deaths.

Additionally, multiple national and state e-prescribing organizations, payers, and professional associations continued to produce educational materials encouraging greater use of e-prescribing. Together, these efforts have resulted in continued growth of e-prescribing in Florida.

Agency e-Prescribing Outreach Strategies

The Agency utilizes data from national e-prescribing organizations to produce a quarterly dashboard of metrics showing trends in adoption and use, as well as a comparison of e-prescribing rates in Florida and nationally. The Agency's Health Information Exchange outreach team participated in numerous events throughout Florida and included information about e-prescribing as an integral part of the program for providers and stakeholders. The benefits of using e-prescribing for all medications was specifically addressed in over 28 presentations in various formats throughout the year. A virtual panel discussion on ePrescribing of controlled substances was one of the highest attended webinar presentations provided in 2018. A link to this virtual panel discussion presentation is available on the Agency's online clearinghouse, which also contains other information about e-prescribing at <http://fhin.net/eprescribing>.

Metrics

The Agency publishes a dashboard of key metrics to track e-prescribing adoption rates in Florida at <http://fhin.net/eprescribing/dashboard/index.shtml>. These metrics enable the Agency to compare progress in Florida with national rates. Specific quarterly metrics include:

- Counts and comparisons of new and refill e-prescriptions
- E-prescribing percentages by quarter and annually
- E-prescriptions transmitted per prescriber
- Electronic requests for Medicaid medication records

The ***e-prescribing rate*** is defined as the number of prescriptions electronically transmitted relative to the estimated number of all prescriptions that could have been e-prescribed. The annual e-prescribing rate in Florida as of the third quarter of 2018 was 75.7 percent, which represents an increase of 1.5 percent over the 74.2 percent annual rate at the end of the third quarter in 2017.

The ***e-prescriber rate*** represents the number of prescribers who transmit prescriptions electronically relative to the number of medical doctors and osteopathic physicians residing in Florida with clear/active licenses to prescribe. Florida's e-prescriber rate at the end of the third quarter of 2018 was 89.9 percent, which represents a 7.2 percent increase over the e-prescriber rate in the third quarter of 2017.

Medication record requests are requests by physicians using e-prescribing tools to access specific patient information such as eligibility, benefits, or medication history. The number of Medicaid medication record requests averaged 439,713 per month through the first three quarters of 2018.

Florida's Electronic Prescribing Clearinghouse

The Agency developed and maintains the [Florida Electronic Prescribing Clearinghouse](http://ahca.myflorida.com/medicaid/ehr) as a single point of access for e-prescribing information. This internet resource is designed to meet the requirements of Section 408.0611 Florida Statutes and provide information on developments and trends in e-prescribing in the state. The overall goal is to promote adoption and improve the quality and effectiveness of e-prescribing. The site contains current and historical Florida annual e-prescribing reports as well as quarterly metrics on adoption. The annual reports present information on the benefits of e-prescribing as derived from health services research and literature. Additionally, information about nationally certified products for the Florida Promoting Interoperability Program, including e-prescribing tools, is located on the companion website: <http://ahca.myflorida.com/medicaid/ehr>.

Health Information Exchange Coordinating Committee

The Agency established the Health Information Exchange Coordinating Committee (HIECC) in 2007 under the State Consumer Health Information and Policy Advisory Council (Advisory Council) as authorized in Section 408.05 (8) Florida Statutes. The HIECC includes representatives of hospitals, long-term care facilities, medical associations, regional health information exchange, clinicians, health plans, rural health organizations, economic development organizations, consumer organizations, and a representative of the Florida Pharmacy Association. The HIECC meets quarterly, with ad-hoc subcommittees meeting as needed. Action steps for the HIECC to further accelerate the adoption of e-prescribing in Florida are detailed in Section 2.8 of this report.

2.8. ACTION STEPS.....	22

Section 1. Status of Electronic Prescribing

Section 408.0611, Florida Statutes, states that the Agency for Health Care Administration (Agency) is to collaborate with stakeholders to create an electronic prescribing (e-prescribing) clearinghouse, coordinate with private sector e-prescribing initiatives, and prepare an annual report on the progress of e-prescribing implementation in Florida. The first annual report was published in January 2008. Previous reports are available at:

<http://fhin.net/eprescribing/dashboard/index.shtml>

This Florida Electronic Prescribing Annual Report provides a general assessment of the status of e-prescribing in Florida in 2018. It presents highlights related to e-prescribing including requirements for Stage 2 and Stage 3 meaningful use of electronic health records (EHR). The report provides monthly metrics on e-prescribing in Florida as available through the third quarter of 2018, based on data provided by national e-prescribing networks and Florida Medicaid. It concludes with a review of Agency strategies to promote e-prescribing in 2019.

1.1. What is Electronic Prescribing?

Electronic prescribing (e-prescribing) uses health information technology to enable the electronic transmission of prescriptions and access to medication histories by prescribing physicians at the point of care. E-prescribing improves prescription accuracy, increases patient safety, and reduces costs as a result of the critical health information it makes available to the physician or other prescribing practitioner. A major benefit of the electronic transfer of prescriptions is the elimination of errors caused by miscommunication commonly associated with handwritten paper prescriptions. E-prescribing can also reduce opportunities for fraud and abuse that currently occur due to a lack of secure prescription delivery to the pharmacy. E-prescribing creates a more traceable trail for auditing purposes.

An article published in *U.S. Pharmacist* at <https://www.uspharmacist.com/article/pros-and-cons-of-e-prescribing-in-community-pharmacies-42392> provides a compilation of benefits and problems of e-prescribing as documented in research literature. Benefits include:

- Enhanced patient safety through avoided errors associated with written prescriptions (i.e., illegible handwriting) and lack of systematic checks that e-prescribing systems can provide;
- Reduced drug costs through formulary decision support, including informing providers of more cost-effective alternatives;
- Increased access to prescription records has been beneficial in drug recalls and natural disasters;
- Improved workflow and reduced patient wait times at the pharmacy;

-
- Assurance that the pharmacy received the prescription; and
 - Reduced handwritten forgeries.

Documented problems related to e-prescribing include:

- Software design issues resulting in unclear or inaccurate prescriptions;
- Costs associated with the technology including start-up and maintenance; and
- Workflow disruption at the pharmacy due to bundled delivery of prescriptions.¹

As defined by the National Council for Prescription Drug Programs, “e-prescribing comprises two functions: 1) Two way [electronic] communication between physicians and pharmacies involving new prescriptions, refill authorizations, change requests, cancellation of prescriptions, and prescription fill messages to track patient compliance; and 2) Potential for information sharing with other health care partners including eligibility and formulary information and medication history.”²

E-prescribing systems are a form of health information exchange that integrate prescribed medication data from multiple stakeholders including pharmacy benefit managers (PBM), payers, and pharmacies. Through these systems, medication histories are available for prescriptions that were brought to the pharmacy on paper or transmitted electronically. E-prescribing systems enable practitioners with authorized access and consent to view medication history information at the point of care for coordination of patient drug therapy and improved quality. E-prescribing systems also provide practitioners with a secure means of electronically accessing health plan formulary information and patient eligibility at the point of care.

When physicians use e-prescribing systems to send prescriptions electronically, the prescriptions are transmitted through secure, private networks. The e-prescribing system transmits information through the use of encrypted telecommunication transmission channels that ensure secure, bi-directional, electronic connectivity between physician practices and pharmacies.

Pharmacy networks connect pharmacies, physicians, and PBMs. The major pharmacy network in the United States is Surescripts, with almost 13.7 billion electronic prescriptions transmitted annually and more than 98 percent of all pharmacies in the United States certified to participate in the network. Another pharmacy network is Change Healthcare, formerly Emdeon eRx Network, performing more than eight billion health information exchanges per year.³ Both Surescripts and

³ Change Healthcare Press Release, “Emdeon to Rebrand As Change Healthcare”, Sept. 3, 2015, <http://changehealthcare.mediaroom.com/news-releases?item=202>

Change Healthcare Networks collect and provide data to the Agency for the metrics displayed in this report.

More information can be found about available e-prescribing products on the Surescripts (www.surescripts.com/) and Change Healthcare (www.changehealthcare.com) websites.

1.2. Electronic Prescribing Highlights in 2018

The federal Health Information Technology for Economic and Clinical Health Act of 2009 (HITECH) established incentives for certain Medicaid providers related to the adoption and meaningful use of electronic health record (EHR) technologies. The HITECH Act also established meaningful use rules that include e-prescribing in the core set of required measures for eligible professionals to qualify for incentive payments. The U.S. Centers for Medicare and Medicaid Services (CMS) and the Agency for Health Care Administration continued administering the Florida Promoting Interoperability Program, formerly known as the Florida Medicaid Electronic Health Record Incentive Program. The last year to enter into the program was 2016. As of September 27, 2018, the program made 17,347 incentive payments totaling over \$576 million to qualifying eligible professionals and hospitals.

Surescripts supported e-prescribing in a number of ways, including efforts to promote the e-prescribing of controlled substances and providing national statistics on e-prescribing rates to assist stakeholders in measuring progress.

The Agency also provides ongoing governance to the Florida Health Information Exchange as well as outreach to pharmacies and other health services providers to promote participation in health information exchange (HIE) services that compliment e-prescribing.

1.3. Electronic Prescribing Metrics and Trends

The Agency publishes a set of indicators to track e-prescribing adoption rates in Florida. Quarterly metrics are typically reported to the Agency by the end of April, July, October, and January from Change Healthcare and Surescripts. Surescripts reports a limited dataset to the Agency for the month ending each quarter. These metrics enable the Agency to gauge progress in Florida and compare it against national rates.

A key indicator is the *e-prescribing rate*, which is the amount of e-prescribing relative to all prescriptions that could have been e-prescribed. The annual average e-prescribing rate has steadily increased since 2007, from 1.6 percent up to 75.7 percent in the third quarter of 2018. Quarterly e-prescribing rates and other metrics are shown in Table 1 below.

Table 1: Florida Quarterly E-Prescribing Metrics

Florida Quarterly E-Prescribing Metrics	Previous Year Comparison 2017Q4	2018Q1	2018Q2	2018Q3
End of Qtr. E-Prescriptions	9,864,856	10,710,901	9,655,827	9,627,677
End of Qtr. E-Prescribers	47,600	48,500	48,600	50,200
Increase in E-Prescriptions Compared to Prior Quarter:	2.6%	8.6%	-9.9%	-0.3%
Increase in E-Prescribers Compared to Prior Quarter:	2.8%	1.9%	0.2%	3.3%
End of Quarter E-Prescribing Rate ⁴ :	78%	81.1%	73.1%	72.9%
Average Monthly E-Prescriptions per E-Prescriber:	207	221	199	192
Clear Active Licensed Prescribing Professionals Residing in FL Counties*	101,829	101,112	98,213	98,026
Percent of Licensed Prescribing Professionals Who E-Prescribed:	47%	48.0%	49.5%	51.2%
Clear Active Licensed Prescribing MDs and DOs Residing in FL Counties**	56,804	56,090	54,824	55,896
Percent of Licensed Prescribing MDs and DOs Who E-Prescribed:	84%	86.5%	88.6%	89.8%

* Counts include all clear active licensed DN, MD, PA, ARNP, PO, and OS licensed professionals as obtained from the DOH's licensure database.

** Counts include only clear active licensed Medical Doctors and Osteopathic Physicians as obtained from the DOH's licensure database.

⁴ Based on est. 151,670,820 denominator/12 months for 2017 and 158,496,000 denominator/12 months for 2018

The average number of e-prescriptions per month continually increased from 2008 through the first nine months of 2018, the most recent time period for which data is available, as shown in Figure 1 below. If this trend continues at a consistent rate, forecasts through the end of 2018 project that more than 10 million e-prescriptions will be processed in Florida each month.

Figure 1. Average Number of Electronic Prescriptions Per Month in 2008 - 2018 and Annual Increase

The average number of e-prescribers increased from 4,492 in 2008 to 50,200 in September 2018 as shown in Figure 2 below. If this trend continues, the number of e-prescribers in Florida is projected to be near 51,000 by the end of 2018.

Figure 2. Average Number of Electronic Prescribers per Month in 2008 - 2018 and Annual Increase

At an estimated annual monthly average of 13.2 million prescriptions per month, Florida’s annual e-prescribing rate through September 2018 is 75.7 percent. Figure 3 below shows the increasing trend in the e-prescribing rate since 2007.

Figure 3. Estimated Average Annual Electronic Prescribing Rate, 2007 - 2018

Figure 4 presents Florida’s e-prescribing transactions and active e-prescribers at the end of quarters in 2018, as reported by Surescripts and Change Healthcare. A total of 9,627,677 e-prescriptions were written at the end of the third quarter of 2018, representing a 0.2 percent increase over September 2017. The totals include the number of new e-prescriptions and refill e-prescriptions.

Figure 4. Number of Electronic Prescribers and New and Refill Electronic Prescriptions in Florida, End of Quarters 2018

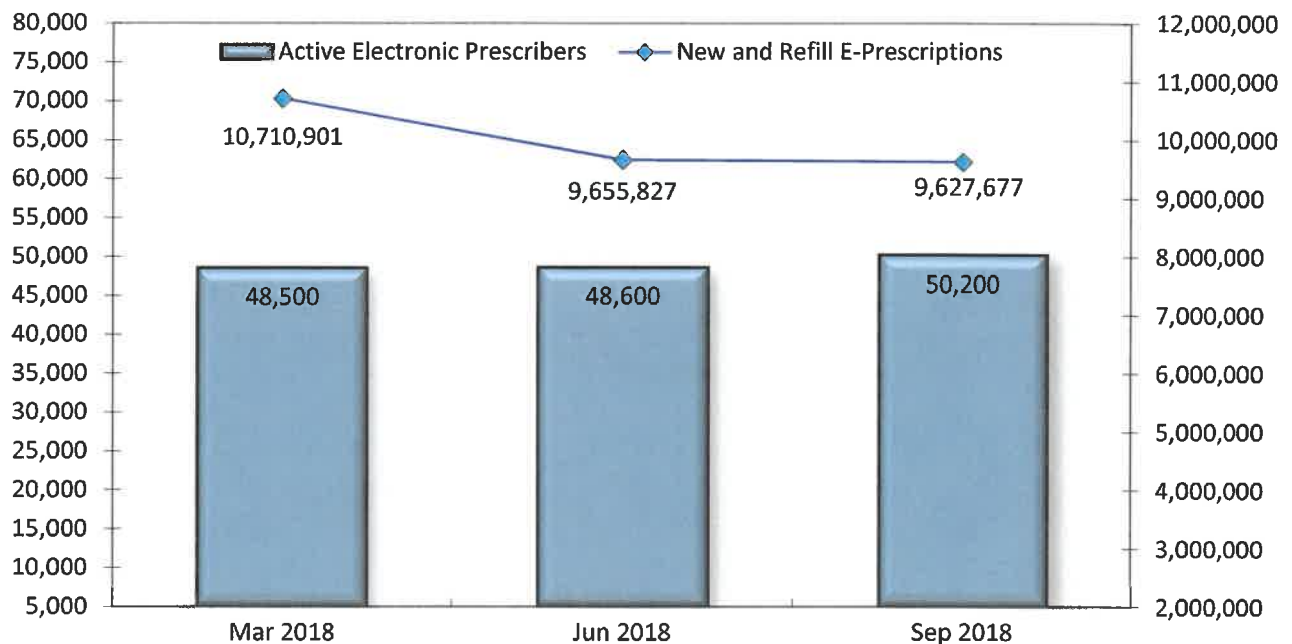

Figure 5 below shows a comparison of the number of new e-prescriptions and refill e-prescriptions and the percent of new e-prescriptions at the end of quarters in 2018.

Figure 5. Comparison of E-Prescribing Activity by New and Refills, End of Quarters in 2018

Figure 6 below shows the number of Medicaid electronic prescribing eligibility transactions, records found, unique number of patients and unique prescribers from September 2017 to September 2018. In 2018, a monthly average of 37,559 Medicaid prescribers issued a monthly average of 439,713 e-prescription eligibility transactions that returned a monthly average of 428,003 records for a monthly average of 171,253 patients.

Figure 6. Florida Medicaid Electronic Prescribing Eligibility Transactions, Records Found, Patients and Prescribers, September 2017 to September 2018

Section 2. Electronic Prescribing Adoption Activities

2.1. Florida Electronic Prescribing Clearinghouse

Section 408.0611, Florida Statutes, was passed into law during the 2007 Legislative Session. It requires the Agency for Health Care Administration (Agency) to create a clearinghouse of e-prescribing information, which was made available on the Agency's website in October 2007. The purpose of the Electronic Prescribing Clearinghouse is to report e-prescribing trends and provide information to promote the implementation of e-prescribing by health care practitioners, health care facilities, and pharmacies in an effort to prevent prescription drug abuse, improve patient safety, and reduce unnecessary prescriptions. The Florida Electronic Prescribing Clearinghouse can be accessed at: <http://www.fhin.net/eprescribing>. Information about nationally certified health IT products and e-prescribing tools, can be found on the companion website, <http://ahca.myflorida.com/medicaid/ehr>.

2.2. Meaningful Use Incentives for Electronic Prescribing

Background

The Health Information Technology for Economic and Clinical Health (HITECH) Act of 2009 established incentive payments for eligible professionals (EPs) and eligible hospitals (EHs) related to the adoption and meaningful use of certified electronic health record technology (CEHRT). The Florida Agency for Health Care Administration administers the Florida Promoting Interoperability Program, formerly known as the Florida Medicaid Electronic Health Record Incentive Program. The program is administered in accordance with federal regulations established by the Centers for Medicare and Medicaid Services (CMS) related to the "meaningful use" of certified electronic health record technology (CEHRT).

The Agency implemented the program in September 2011. Participating providers could register and apply for incentive payments associated with adopting, implementing, or upgrading to CEHRT, and the subsequent meaningful use of CEHRT. Demonstration of meaningful use was not required to receive an incentive payment in the provider's first payment year. In subsequent payment years, the provider could apply for additional incentive payments that required documentation of the meaningful use of the CEHRT, including meeting the e-prescribing requirements of the program.

The last year to begin participating in the program was 2016 and the program is scheduled to continue through 2021. As of September 27, 2018, the Florida Promoting Interoperability Program has made 17,347 incentive payments totaling over \$576 million to qualifying EPs and EHs.

Electronic Prescribing Objective for Meaningful Use Reporting

The CMS meaningful use requirements include electronic prescribing (e-prescribing) as a measure

required for EPs to qualify for incentive payments. Eligible professionals were required to achieve an e-prescribing rate of more than 40 percent in Stage 1 to qualify for an incentive payment under the program. This threshold is applied to all of the provider's patients, not limited to Medicaid and Medicare. Although e-prescribing was not a Stage 1 core requirement for EHs, that core set included several measures related to medication management; including computerized physician order entry (CPOE), drug-drug interaction checks, maintaining active medication lists, and maintaining active medication allergy lists.

The CMS meaningful use requirements for Modified Stage 2, effective December 15, 2015, require EPs to e-prescribe more than 50 percent of all permissible prescriptions. The CMS final rule for Stage 3, beginning in 2019, increases the e-prescribing rate for EPs to more than 60 percent of all permissible prescriptions. The Stage 3 final rule also requires EHs to query a drug formulary, transmit more than 25 percent of discharge prescriptions electronically, and removes unchanged refill prescriptions from the query requirement for drug formulary. Controlled substance prescriptions can be removed from the denominator for both EPs and EHs.

Modified Stage 2 and Stage 3 Meaningful Use Requirements Related to Medication:

- Eligible professionals and eligible hospitals must use CPOE for medication, laboratory, and radiology orders directly entered by any licensed health care professional that can enter orders into the medical record per state, local, and professional guidelines for more than 60 percent of medication orders, more than 30 percent of laboratory orders, and more than 30 percent of radiology orders in Modified Stage 2. The thresholds for laboratory and diagnostic imaging are increased in Stage 3 to more than 60 percent of lab orders, and more than 60 percent of diagnostic imaging orders;
- Eligible professionals and eligible hospitals must enable and implement the functionality for drug-drug and drug allergy interaction checks for the entire EHR reporting period;
- Eligible professionals and eligible hospitals must provide a summary of care record electronically for more than 10 percent of transitions of care or referrals in Modified Stage 2. Stage 3 Health Information Exchange Objective requires eligible professionals and hospitals to attest to three measures and meet at least two of the three. Measure 1 requires a summary of care be electronically exchanged for more than 50 percent of their transitions of care. Measure 2 requires the eligible professional or hospital to receive or retrieve a summary of care and incorporate it into their EHR for more than 40 percent of transitions or referrals received and new patient encounters. Measure 3 requires the eligible professional or hospital to perform a clinical information reconciliation which includes medication reconciliation for more than 80 percent of transitions or referrals received and new patient encounters;

-
- The eligible hospital or professional who receives a patient from another setting of care or provider of care, or believes an encounter is relevant, should perform medication reconciliation (more than 50 percent in Modified Stage 2 and Stage 3 changes the measure into a clinical information reconciliation performed for more than 80 percent of transitions or referrals received and new patient encounters);
 - Eligible professionals and eligible hospitals must generate and transmit permissible prescriptions electronically (for eligible professionals, more than 50 percent in Stage 2 and more than 60 percent in Stage 3); and
 - Eligible hospitals must generate and transmit permissible discharge prescriptions electronically for new and changed prescriptions for more than 10 percent in Stage 2 and more than 25 percent in Stage 3.

2.3. Electronic Prescribing of Controlled Substances

Until 2010, the U.S. Drug Enforcement Administration (DEA) regulations required prescription for controlled substances to be written on a paper prescription pad. On March 29, 2010, the DEA issued an interim final rule permitting e-prescribing of controlled substances (EPCS). The rules specify system requirements related to identity proofing; access control; and auditing for prescribing practitioners and other registrants, e-prescribing vendors, pharmacies and pharmacists, and others.

On October 19, 2011, the DEA issued clarification on the interim final rule emphasizing that third-party audits of EPCS software application must encompass all regulation requirements including security and process integrity. The DEA also announced the first DEA approved certification process for EPCS and the posting of DEA approved certifying organizations on the DEA's website.⁵

The Agency worked with the Florida Pharmacy Association, the Board of Pharmacy, and other stakeholders to gain an understanding of Florida law related to EPCS in order to encourage e-prescribing. In 2014 Surescripts changed the map of states' regulation status to include Florida as allowing EPCS of Schedule II drugs.

On March 27, 2016, New York became the first state in the U.S. to mandate e-prescribing of non-exempt controlled and non-controlled substances through their Internet System for Tracking Over Prescribing (I-STOP) and to impose financial penalties as well as jail time for non-compliance.⁶ New York was ranked #1 in the nation for EPCS in the 2016 and 2017 Surescripts National Progress

⁵ Federal Register Volume 76, Number 202 (Wednesday, October 19, 2011), Rules and Regulations, Pages 64813-64816, "Electronic Prescriptions for Controlled Substances Clarification", https://www.deadiversion.usdoj.gov/fed_regs/rules/2011/fr1019.htm

⁶ Mandatory Electronic Prescribing Effective March 27, 2016, http://www.health.ny.gov/professionals/narcotic/electronic_prescribing/

Reports. Almost 99 percent of New York’s pharmacies are EPCS enabled, almost 75 percent of Prescribers are EPCS enabled and 93.8 percent of controlled substances are prescribed electronically.

Maine’s mandate to e-prescribe controlled substances went into effect on July 1, 2017. Maine is ranked third in the nation for EPCS with over 99 percent of pharmacies EPCS enabled, 51 percent of prescribers EPCS enabled and 41.2 percent of controlled substances e-prescribed.

Connecticut’s mandate to e-prescribe controlled substances went into effect on January 1, 2018. Connecticut is ranked eleventh in the nation for EPCS with over 99 percent of pharmacies EPCS enabled, almost 32 percent of prescribers EPCS enabled and 10.7 percent of controlled substances e-prescribed.

Arizona’s EPCS mandate goes into effect January 1, 2019.

North Carolina and Rhode Island have EPCS mandates going into effect on January 1, 2020.

Virginia’s EPCS mandate goes into effect on July 1, 2020 and several other states are following suit.

As part of H.R. 6, the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment (SUPPORT) for Patients and Communities Act, both chambers of Congress introduced the Every Prescription Conveyed Securely Act of 2018 (HR3528 / S2460). The Act requires e-prescribing of controlled substances in Medicare Part D by January 1, 2020. The House version was approved by voice vote in the Energy and Commerce Committee. The Senate version is in committee.

In 2018, Surescripts published their 2017 National Progress Report at <https://surescripts.com/news-center/national-progress-report-2017/>. In the EPCS State Rankings section of the Surescripts report, 88.5 percent of Florida pharmacies were enabled for EPCS, 8.2 percent of Florida prescribers were enabled for EPCS and 7.8 percent of Florida’s controlled substances were e-prescribed. This compares to the reported 93.1 percent of pharmacies across the nation that were EPCS enabled, 22 percent of national prescribers were EPCS enabled and 18.8 percent was the national rate of e-prescribed controlled substances. Surescripts metrics on EPCS in Florida may be viewed at <http://fhin.net/eprescribing/dashboard/index.shtml>. More information about engaging in EPCS is available on the Surescripts website at: <https://surescripts.com/enhance-prescribing/e-prescribing/e-prescribing-for-controlled-substances/>.

2.4. Pharmacy e-Health Information Technology Collaborative

In September 2010, nine national pharmacy organizations launched the Pharmacy Health Information Technology Collaborative (Collaborative). The Collaborative works toward the greater participation of pharmacists in health information exchange (HIE) and addresses opportunities for pharmacists to access and contribute to the patient specific information in EHRs. A key objective of the collaborative is to identify the minimum data set and functional EHR requirements for the

delivery, documentation, and billing of pharmacist-provided medication management services. Such requirements include access to key medical information such as laboratory data and bi-directional communication flow among all practitioners.

The Collaborative submitted comments to the Office of the National Coordinator for Health Information Technology (ONC) in response to the proposed rule, *Voluntary 2015 Edition Electronic Health Record (EHR) Certification Criteria; Interoperability Updates and Regulatory Improvements*, posted February 26, 2014 in the Federal Register. The Collaborative and its member organizations are supportive of continued certification criteria and standards for HIT and EHR in achieving a positive effect on non-eligible pharmacist health care providers.

The Collaborative submitted [comments](#) to ONC in April of 2015 in response to the proposed *Connecting Health and Care for the Nation: A Shared Nationwide Interoperability Roadmap Draft Version 1.0*. The Collaborative expressed appreciation to ONC for recognizing pharmacists and their roles in various sections of the roadmap and was supportive of the proposed roadmap as well as ONC's role in establishing governance policy and standards that enable nationwide interoperability.

The Collaborative published, "The Roadmap for Pharmacy Health Information Technology Integration in U.S. Health Care: 2014 to 2017 Update" (roadmap) in 2015. The roadmap includes goals and objectives to be prioritized by stakeholders. Goals include integrating clinical data with e-prescribing information, including pharmacy services in HIE, developing infrastructure that supports the pharmacists' role as health care providers and includes a section on ONC's 10-year vision to achieve interoperability.⁷

The Collaborative submitted five comment letters to ONC on the following proposed rules: "Proposed Final 2017 Interoperability Standards Advisory"⁸; "Request for Information regarding assessing Interoperability for Medicare Access and CHIP Reauthorization Act of 2015 (MACRA),"⁹; "ONC Health IT Certification Program: Enhanced Oversight and Accountability rule,"¹⁰; "Proposed Final 2016 Interoperability Standards Advisory,"¹¹; and "Request for Information: Certification

Frequency and Requirements for the Reporting of Quality Measures under CMS Programs.”¹² Common positions and comments called for recognizing pharmacists as health care providers. This would make pharmacists eligible to receive incentives, make patient summary of care documents accessible to pharmacists, and express support for the universal use of interoperability and code set standards, certified Electronic Health Record (EHR) technology and EHR incentive measures. Comments may be viewed via links in the provided footnotes.

The Collaborative gave comment to ONC on six specific topic areas of the 21st Century Cures Act Trusted Framework and Common Agreement (standardization, transparency, cooperation and non-discrimination, security and patient safety, access, and data-driven choice).¹³

In November 2018, the Collaborative released its revised strategic plan, [The Roadmap for Pharmacy Information Technology Integration in U.S. Health Care: 2018 to 2021 Update](#)¹⁴. The roadmap contains three key update goals.

- Define areas the pharmacy profession needs to continue working on that are related to pharmacists’ integration into the national health IT infrastructure.
- Define the areas the Collaborative should focus on that are related to the vision, mission, goals, and objectives the Collaborative’s 2018-2021 Strategic Plan.
- The goals reflect the efforts of the Collaborative to drive cultural technology changes for how pharmacists interact and collaborate with other of the healthcare team.

2.5. Electronic Prescribing Standards and Certification Bodies

The federal Medicare Prescription Drug, Improvement, and Modernization Act (MMA) included a provision for the adoption and testing of specific technical standards for the data exchange transaction that Part D plans would use for e-prescribing. In 2009, the National Committee on Vital and Health Statistics recommended that the CMS support the National Council for Prescription Drug Programs (NCPDP) SCRIPT 10.6 standard in its Medicare Part D e-prescribing initiative.^{15 16}

The EHR certification final rule, issued October 16, 2015, by the Office of the National Coordinator for Health Information Technology establishing standards, implementation specifications, and certification criteria for EHRs and requires use of NCPDP SCRIPT version 10.6 as the only content exchange standard for e-prescribing in the ambulatory and inpatient settings. The rule requires the capacity to use the vocabulary standard RxNorm, specifically RxNorm concept unique identifiers (RXCUIs).¹⁷

The NCPDP was awarded a 5-year "Standards Development Organization Collaboration to Enhance Standards Alignment, Testing, and Measurement Project" grant in March 2016 from ONC. The purpose of the grant was to test and measure the industry's use of standards and to facilitate interoperability and workflow efficiency.

In September 2017, the NCPDP Foundation awarded a grant to Johns Hopkins Medicine, in the interest of patient safety and standards adoption, to implement the CancelRx functionality in NCPDP's SCRIPT Standard for ePrescribing into its EHR and pharmacy management system in the ambulatory setting and provide feedback to NCPDP on lessons learned.¹⁸

The NCPDP SCRIPT Standard Implementation Guide and Standards Matrix were updated in 2018. The Standards Matrix showing the status of guide updates may be viewed at <http://www.ncdp.org/NCPDP/media/pdf/StandardsMatrix.pdf> and NCPDP standards and descriptions may be viewed at <http://www.ncdp.org/Standards-Development/Standards-Information>.

CMS finalized updates to the Medicare Part D Prescription Drug Benefit Program for contract year 2019 (CMS-4182-F), as filed in the federal register in April 2018 at <https://s3.amazonaws.com/public-inspection.federalregister.gov/2018-07179.pdf>, including the adoption of NCPDP SCRIPT Standard Version 2017071 beginning on January 1, 2020. NCPDP announced on September 13, 2018 that it released the NCPDP eRx Validation Suite, available at <https://devtools.ncdp.org/erx/#/home>, to support testing and ensure correct implementation of the NCPDP SCRIPT Standard Version 2017071 in preparation for transactions adopted under Medicare Part D. The newest version of the SCRIPT Standard has enhancements such as to: digital signature requirements for the electronic prescribing of controlled substance medications; medication history response transactions to return data from Prescription Drug Monitoring Program (PDMP) administrators; support grouping of multiple prescriptions; support electronic

transmission of compound medication information; it now allows 1,000 characters in directions for use; and many other enhancements.

2.6. Outreach to Pharmacies

The Agency continues to assist pharmacists and other providers interested in using services offered through the Florida HIE. Outreach efforts to pharmacists typically focus on the Florida HIE's Direct Messaging Service. This nationally accredited service allows for the secure exchange of messages with providers using other nationally accredited vendors. Information on the benefits, registration, and costs of using Florida HIE services are made available to pharmacists in webinars, workshops, and online at www.florida-hie.net.

2.7. Health Information Exchange Coordinating Committee

Section 408.0611, Florida Statutes, requires that the Agency convene quarterly meetings of stakeholders from organizations that represent health care practitioners, health care facilities, pharmacies, organizations that operate e-prescribing networks, organizations that create e-prescribing, and regional health information organizations to assess and accelerate the implementation of e-prescribing. This legislation also requires the Agency to create the Electronic Prescribing Clearinghouse website.

The Health Information Exchange Coordinating Committee (HIECC) was formed by the State Consumer Health Information and Policy Advisory Council (Advisory Council) to advise the Agency in implementing a strategy to establish privacy-protected, secure, and integrated exchange of electronic health records among physicians involved in patient care which includes the exchange of medication information through e-prescribing. The Agency assigned the HIECC the advisory role regarding e-prescribing promotional activities in 2010. A representative of the Florida Pharmacy Association was added to the membership of the HIECC and approved by the Advisory Council at its September 16, 2010, meeting.

The HIECC and Advisory Council continue to monitor progress in e-prescribing adoption and the Agency's strategies to promote e-prescribing. Three 2018 HIECC meetings were held as of the third quarter. Meeting information is provided at <http://fhin.net/committeesAndCouncils/hiicc.shtml>.

2.8. Action Steps

In 2019, the HIECC and the Agency will address the following action steps to further accelerate the adoption of e-prescribing in Florida:

-
- 1) Continue to report e-prescribing metrics on a quarterly basis and include Florida Medicaid medication history statistics as available. The information will be posted on the Agency's website, www.fhin.net, as part of the Florida Electronic Prescribing Clearinghouse;
 - 2) Promote e-prescribing adoption as an integral part of the education and outreach efforts for the adoption of electronic health records conducted under the Health Information Technology for Economic and Clinical Health Act (HITECH) programs. These efforts will be coordinated through the leadership of the HIECC;
 - 3) Engage the participation of state professional pharmacy associations and other stakeholders in promoting the e-prescribing of controlled substances consistent with applicable law;
 - 4) Support national standards for "fully informed" e-prescribing that require health plans and vendors to electronically transmit medication history, formulary and benefit information to e-prescribers and pharmacies;
 - 5) Identify and promote opportunities for the participation of pharmacists in health information exchange (HIE) and work with pharmacists to identify HIE opportunities; and
 - 6) Continue to disseminate e-prescribing information to the public. The Agency will include e-prescribing information for consumers on the web at www.floridahealthfinder.com.
